

```
1  import type { ReactNode } from "react";
2
3  type ReadingCardProps = {
4    title: string;
5    minutes: number;
6    children?: ReactNode;
7  };
8
9  // Type annotations and JSX, together on the page.
10 export function ReadingCard({
11   title,
12   minutes,
13   children,
14 }: ReadingCardProps) {
15   return (
16     <article className="reading-card">
17       <h2>{title}</h2>
18       <p>{minutes} minutes of quiet reading</p>
19       {children && <div>{children}</div>}
20     </article>
21   );
22 }
23
```
